

[illegible]

## MAIN TECHNICAL FEATURES

Skirting board and wall trunking system with 3 or 5 compartments.

External dimensions: 70x20 or 130x28 mm.

Material: technopolymer on rigid PVC base, self-extinguishing V0 (UL94) and high resistant to UV rays.

Standard colours: white RAL 9001 and slate-grey RAL 7021.

System protection degree: IP40.

Resistance to mechanical shocks IK 08 (shocks up to 5 j).

Resistance to heat in continuous use: up to +70° C.

Resistance to abnormal heat: up to 650° C (Glow Wire Test, Reference Standard IEC 695-2-1).

Insulation resistance > 100 MΩ. Dielectric voltage > 3.000 V~.

Installation temperature range: minimum -5° C, maximum +60° C.

Cover removal: by a proper tool only.

Perfectly integrating with the whole range of trunkings Series MC and MCA.

Reference Standards: EN 50085-1, EN 50085-2-1.

Products complying with the main requirements of the regulation B.T. 2006/96/CE.

Products complying with the regulation RoHS 2002/95/CE.

## TECHNICAL SPECIFICATION

Perfectly symmetric trunking base: there isn't any top or bottom to pay attention to during the installation

Wrap-around cover without edges; functional modern design

Cover is supplied with a transparent protective film

Compartment lid prevents the cables from falling out during the installation

Perforated bottom for a quicker and more precise installation

3 or 5 inner compartments for any distribution need

Wide inner space  
3 compartments: 202 mm<sup>2</sup>  
5 compartments: 696 mm<sup>2</sup>

Separate compartments preventing the wires of different circuits from getting mixed

The skirting board and wall trunkings Series 20 are available in 2 sizes: SIMPLY System 70x20mm with 3 compartments and MAXI System 130x28mm with 5 compartments; the two dimensions are complementary and can be combined together by specific couplings, with the great advantage of using the best dimension for any installation need.

They are made of technopolymer on rigid self-extinguishing PVC base and can be supplied in two

different colours, white ral 9001 and slate-grey RAL 7021; they are characterized by the perfect symmetry of the inner compartments, they can be easily installed both on the wall and as skirting board along the doors. Each compartment is big enough to allow the installer to put a considerable number of cables, fitting for the requested use.

The perfectly separated compartments permit to put, in the same trunking, the wires of different electric circuits: power,

phone, data transmission and other, without any risk of interferences or inappropriate overlapping, according to the Standard CEI 64-8.

The modern design of the cover without edges perfectly fits into the environment and can be removed only by a proper tool, in order to avoid accidental opening. It is supplied with a protective plastic film preventing it from getting damaged during the transport or the installation.

## TECHNICAL SPECIFICATION

Tower and wall boxes for dimension 70x20

The boxes can be used with the trunking both passing through and stopping into the box

The boxes and the components of the system can be assembled by snap joints without using any screws

The smoothed design of the Series 20 perfectly fits in with any environment

Thanks to the exclusive ending system of the trunking which stops into the box there is no need for additional end caps

The boxes are big and deep enough to contain the modern domotic devices

The end cap can be perfectly put into the joining cover

It is possible to join the two different sizes of the skirting board trunking by the derivation box EC20209/EC20309

From today it is no longer necessary to terminate the trunking track by the usual cap: the tower and wall boxes for the skirting board and wall trunking Simply System in the dimension 70x20mm have an integrated closing system which also allows to interrupt the trunking. That particular solution makes

undoubtedly save time and money: in a single operation you can install the box and end the trunking, all you need to mount the box is contained in the box package. Then there is no need to use further accessories like the end cap. Thanks to the perfectly symmetric trunking base (there

isn't any top or bottom to pay attention to during the installation) the trunking track can be terminated indifferently on the right or on the left; in this way it isn't necessary to have two different mirror caps like with the asymmetric trunkings.

## SKIRTING BOARD AND WALL TRUNKING SERIES 20

### MAIN TECHNICAL FEATURES:

- Made of self-extinguishing technopolymer on rigid PVC base.
- Perforated bottom for an easier installation.
- 3 or 5 mirror inner compartments.
- Wrap-around cover removable only by a proper tool.
- Standard length: 2mt-long bars.
- Cover supplied with a transparent protective film.
- Supplied in strong cardboard boxes to make both the transport and the storage easier.
- The first compartment near the floor can be used only for telecommunication circuits.

## ACCESSORIES SERIES 20

### MAIN TECHNICAL FEATURES:

- They are composed of a flexible internal part, easy to install by screws and permitting the full isolation and separation of the cables in their compartments, and of a rigid cover with a variable angle which can be set directly on the trunking with a simple click.
- Since it is installed in places exposed to accidental hits, the external angle has rounded edges without in order to increase the impact surface.
- **Internal angle:** variable from 70° to 110°.
- **External angle:** variable from 60° to 120°.

## ACCESSORIES SERIES 20

### MAIN TECHNICAL FEATURES:

• **The variable flat angle** joins two straight trunking tracks installed on the same level with an intersection angle varying from 90° to 170°. It is composed by a lower part which can be sectioned according to the needed angle width and is to be fixed to the trunking by screws, and by a modular cover to be put on the trunking. Small hooks allow the angle to remain set to the trunking although in case of strong strikes.

• **The 3-way junction box** is absolutely necessary to get T-derivations from the straight trunking track. The inner pre-cutting, shaped for different dimensions, makes the installation easier and permits, besides a perfect design, to keep IP protection degree.

It is also used for derivations perpendicular to the trunking level or joinings to the floor trunking.

The internal grid, fixed to the wall by screws and to the trunking by a click, prevents from any contact or overlapping of the cables. For the reduction from 130x28 to 70x20 trunking use: EC20209 or EC20309.

## ACCESSORIES SERIES 20

### MAIN TECHNICAL FEATURES:

- **Bottom straight joint:** can be easily fixed to the trunking bottom by screws; installed inside the trunking it assures the perfect lining and the continuity of the internal compartments.
- **Cover straight joint:** can be used to cover the contact point of two covers, permits to keep the protection degree IP40 and gives the whole a nice design without any interruptions. The special hooking system to the trunking bottom assures a very good hold in case of a casual hit.
- **End cap:** entirely closes the trunkings and avoids accessing the internal compartments.

## ACCESSORIES SERIES 20

### MAIN TECHNICAL FEATURES:

- **The device box hole centre distance 83,5mm – 3 modules** - can be used to install the electrical devices, up to 3 Italian standard devices with the blank cover it can be employed as derivation box.
- This item is composed of 4 parts:
- the bottom, to be fixed to the trunking with a simple click and to the wall by 4 screws; it also serves insulating base and grid keeping the different electrical circuits separated.
- the upper part properly shaped to house the device frames.
- the trunking covering piece which not only has a protective function but also gives the whole box an elegant harmonic design.
- the integrated end cap permits to interrupt the trunking without using an additional end cap.
