

High-strength sheet steel

A comparison between the cabinet structure and the car structure can be made.

As a matter of fact, HC260LA sheet steel (EN10268) is included in the specifications of many car producers:

- it has optimal mechanical features
- it allows for the reduction of the thickness without modifying the mechanical features
- it ensures a minimum yield point (as raw material already)
- it is suitable for structures stressed by shock or efforts
