

PMA product recommendation for installations in cold environments

For installations in environments with temperatures down to -50°C PMA recommends to use the subsequent products:

Conduit types

PCS: PA12

specially modified, for dynamic applications and continuously exposed to sunlight and heavy weather conditions.

VCS: PA6

specially modified, for static applications.

PCL: PA6

specially modified, for static applications where no significant mechanical impact has to be expected.

Fitting types

PMAFIX Pro:

new PMA fitting series for highest requirements and also continuously exposed to sunlight and heavy weather conditions.

PMAFIX IP68:

PMA fittings for applications where no significant mechanical impact has to be expected at -50°C.

Please refer to the relevant technical datasheets for additional product characteristics.
